FROM THE LEADERS IN WATER MANAGEMENT SOLUTIONS

FRIATEC ELECTROFUSION

PRODUCT NAME: Friatec Electrofusion

PARTS USED: 110mm Frialen Couplers and Spigot Tapping Saddles.

WHAT IS IT? An Electrofusion system that provides a permanent joint on pressurised PE pipelines.

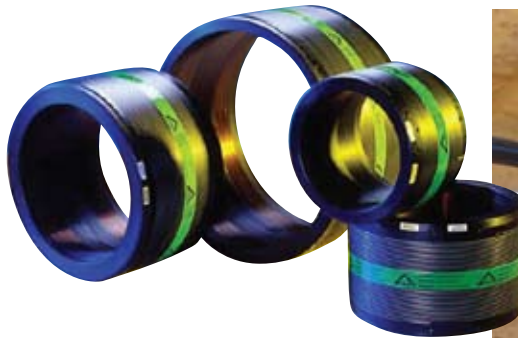

WHERE IS IT USED? Used in many industries where permanent PE pipe joins are needed.

When Muchea Irrigation began work on the Cullalla feedlot in WA, they needed to find a fail safe way of permanently connecting the PE pipework. Given that sections of the pipe were to be covered over with concrete pads, the connections had to be reliable given the cost involved if future repair work was required. With multiple connections to be made upon a long stretch, equipment portability and ease of use were essential.

With all of this in mind, the team from Muchea Irrigation chose Frialen electrofusion. Friatec's easy to use and transport fusion units were a big plus along with the simple to use barcode scanning process. These features plus Frialen's reputation for quality made the choice a simple one.

With Frialen helping to secure the water supply, the cattle going into the forty-eight feedlot pens will get all the water they need.
